

VIDEO HOSTING PLATFORMS

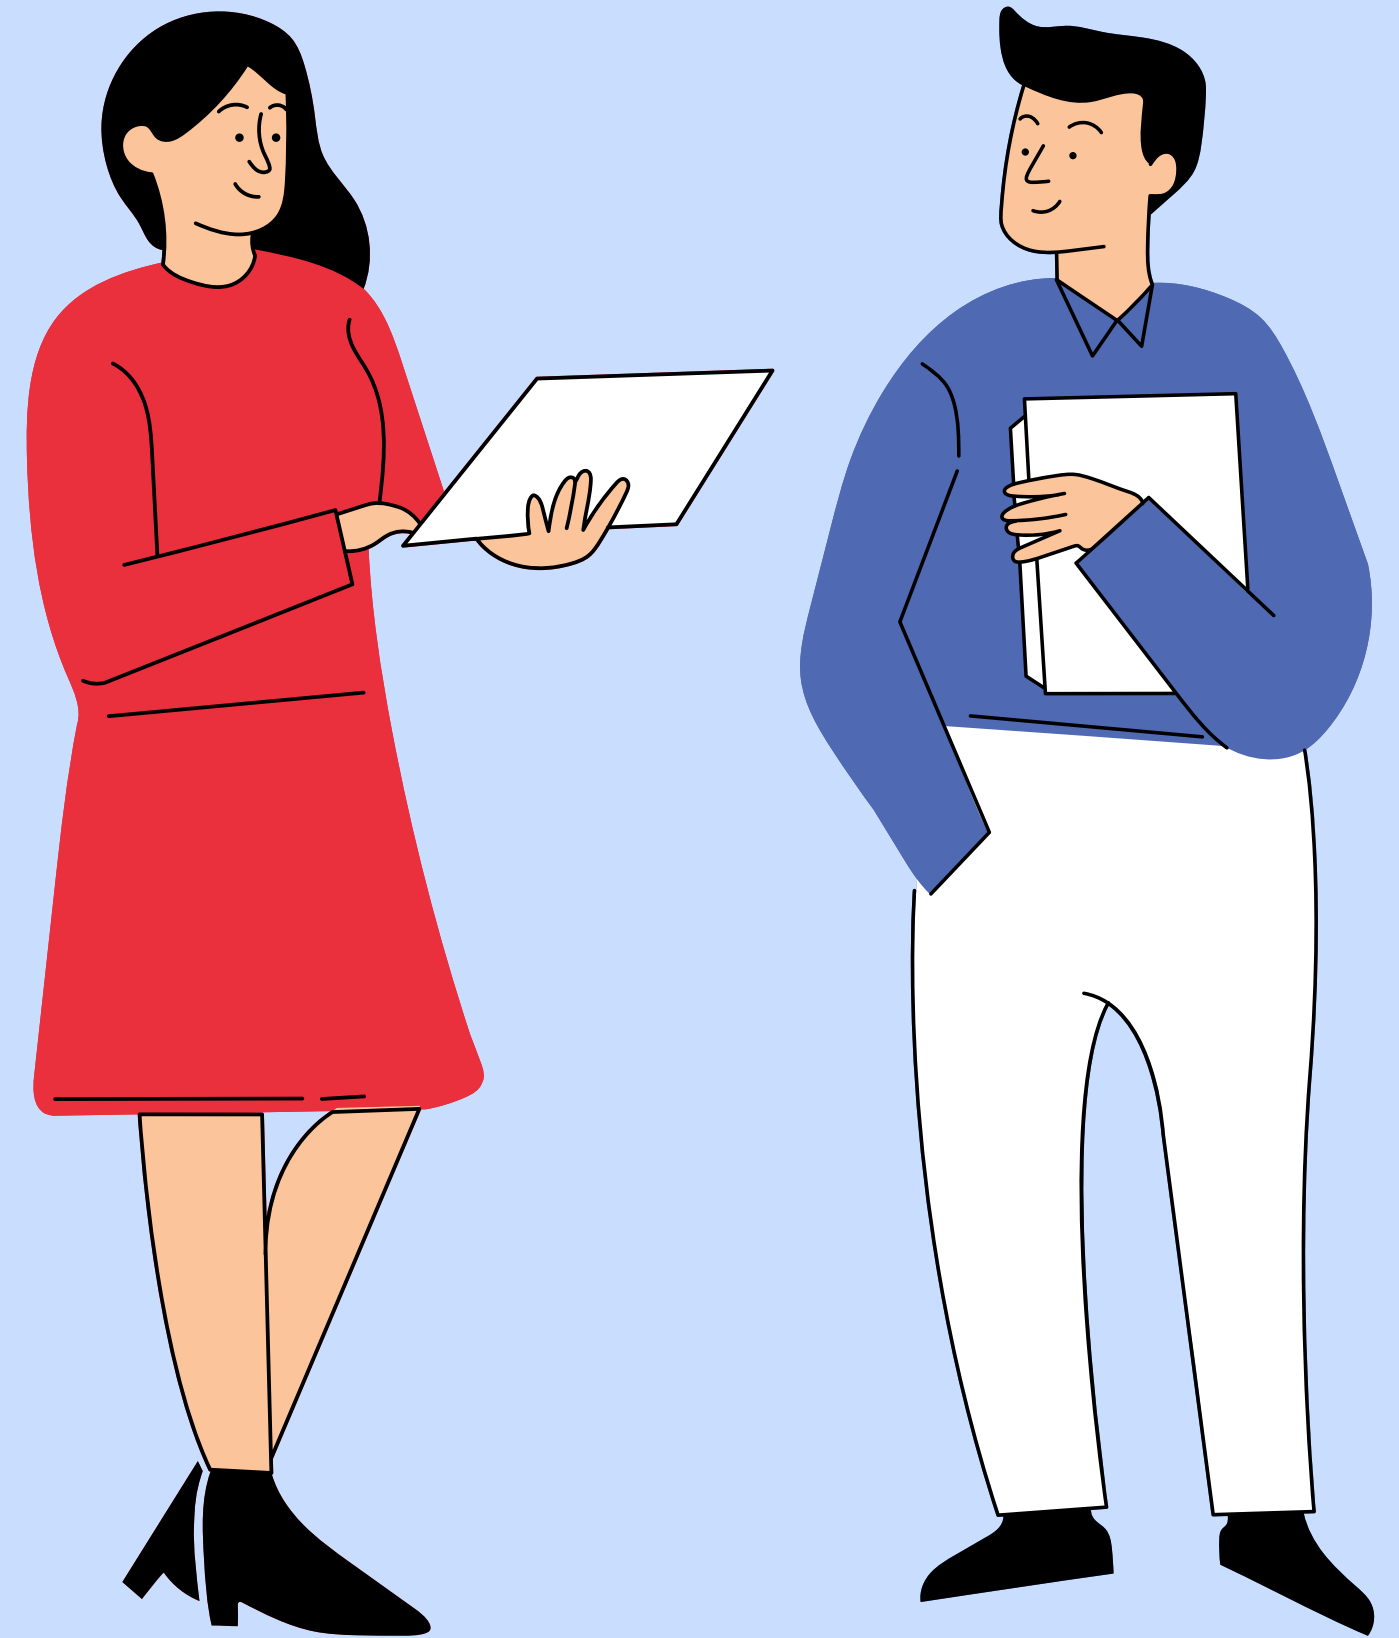

Educational video production

Abdul Rakhmanuly Abdulkarim

Lesson aims

- Understand the process of educational video production and its types;
- Understand the types of video hosting platforms;
- Learn the principles of producing educational videos on different social media platforms;
- Practical activity: Produce tutorials or short lessons, educational videos

Part 1

IDEA AND LEARNING OBJECTIVES 10 MINUTES

FIRST STEP. WRITE DOWN ANSWERS FOR THESE QUESTIONS

1

What is your topic?

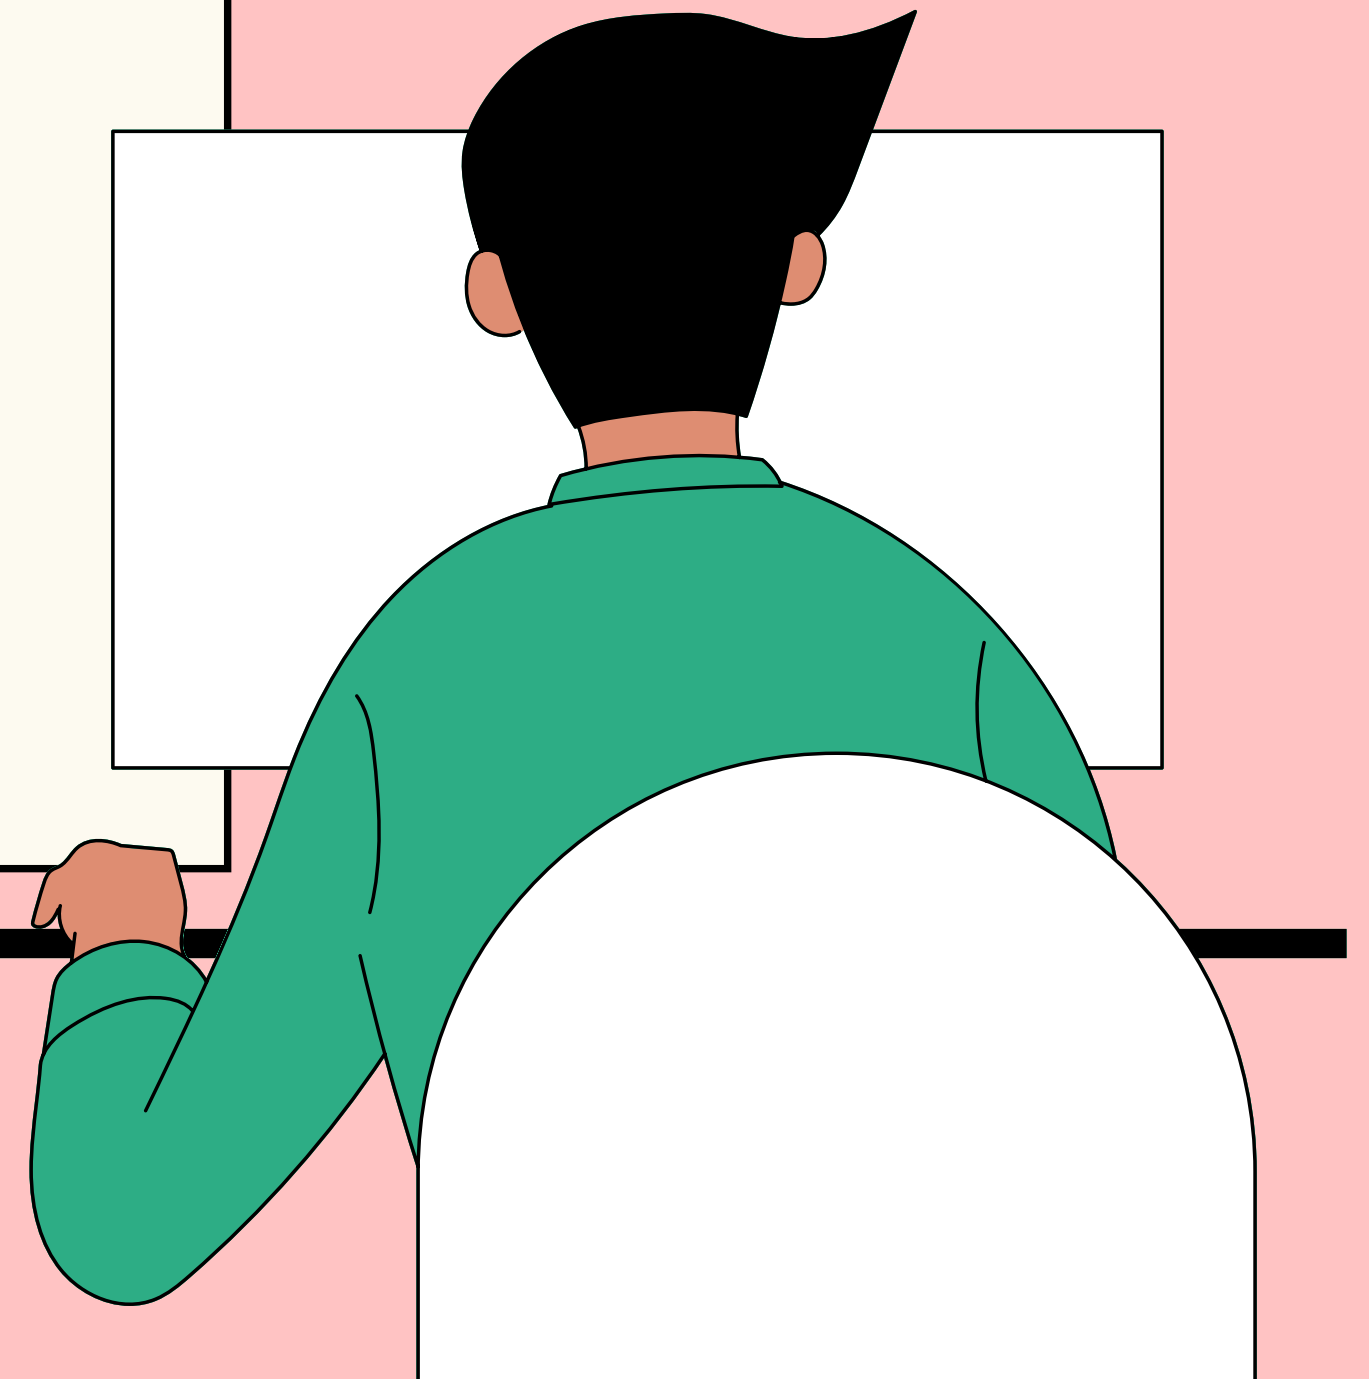

What are your teaching objectives?

What do you want your students to learn from this
video?

What is the best way to achieve
this?

Part 2

PRE-PRODUCTION
(SCRIPT AND
COMPOSITION)
35 MINUTES

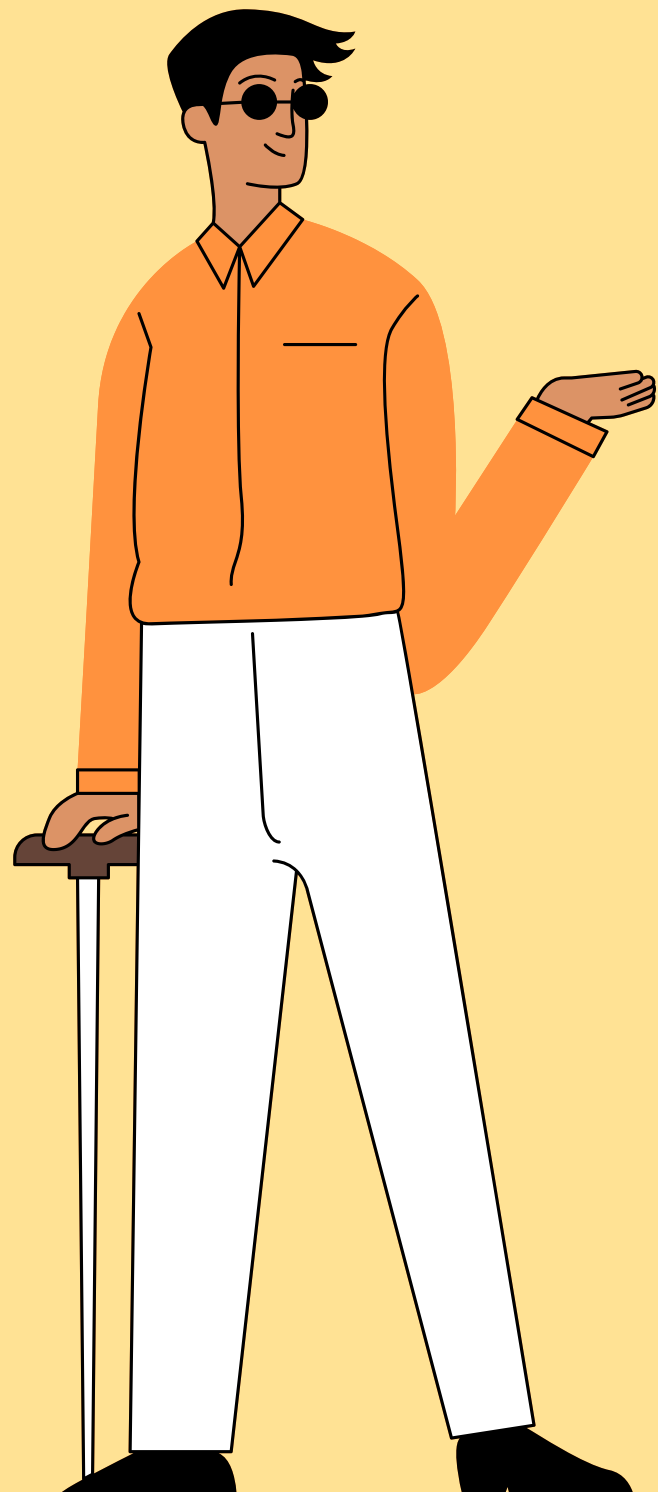

- We speak approximately three words in one second (Smith, 2011), so be aware that if you shoot a 5-minute video, your script should not have to be more than 900 words. For more effect, count two words per second, so 600 words are preferable for a 5-minute video.
- "consists of putting down on paper all the things you intend to put into the programme in note form, with the visuals on the left and an indication of what the sound will be on the right" (Watt, 1997, p. 43) so prepare visuals for your video beforehand.

- In addition to considering formal aspects like background, light, or the best angle of the camera, think about emotions and smiles while speaking too.
- Based on Postman's (1987) insight which claims that "the average length of a shot on network television is only 3.5 seconds, so that the eye never rests, always has something new to see" (p. 88-89), so add to your script dynamic actions and changes in the frame and narrations, so viewers always get engaged with the video.

- Make narration and A-rolls short and intensive, with quick changes from one frame to another. For the longer narrations, add B-rolls with the movements or, if possible, A-rolls with the speaker moving towards the camera to engage viewers with the video.
- Think about ready-to-use animations, episodes from other videos, and transitions, and search for pictures, thematic B-rolls, background music, and sound effects beforehand.

Part 3

Production
(Shooting and
narrating)
25 minutes

- Start to shoot your video based on your script;
- Start editing, cutting and connecting A-rolls, arranging voiceover with the video in the final results;
- Consider the cognitive load of the viewers, so they are not overwhelmed with the channel of the information they are receiving. For example, reduce the number of words on the screen by keeping only essential words and use pictures to represent abstract or essential things where it is needed.

Post- production

Choose a video hosting platform and add it to your course in LMS, if possible in embed version (10 minute)

Thank you
